Asthma is a respiratory disorder that causes inflammation in the lungs which results in narrowing of the airways. When the airways become inflamed and narrowed, it is difficult to move air in and out of the lungs. People with asthma have recurrent episodes of airflow limitation.

Asthma Quiz | AAAAI

An asthma attack occurs when asthma symptoms worsen acutely, and patients feel as if they cannot breathe. Asthma is inflammation and narrowing of the airways (bronchi), and during an attack the muscles around the bronchial tubes constrict and make it very difficult to breathe. Other symptoms may include wheezing or a rattling sound in the chest.
