### **Gorillas**

Gorillas are ground-dwelling, predominantly herbivorous apes that inhabit the forest of central Sub-Saharan Africa. The genus *Gorilla* is divided into two species: the eastern gorillas and the western gorillas (both critically endangered), and either four or five subspecies. They are the largest living primates. The DNA of gorillas is highly similar to that of humans, from 95 to 99% depending on ...

### **Gorilla - Wikipedia**

Gorillas are gentle giants and display many human-like behaviors and emotions, such as laughter and sadness. In fact, gorillas share 98.3% of their genetic code with humans, making them our closest cousins after chimpanzees and bonobos.

From the scientific perspective, gorillas are tailless primates belonging to the family Hominidae and genus Gorilla. About 7 million years ago, their ancestors split from other primates known as the “great apes.” This group also includes chimpanzees, bonobos, and orangutans. Their habits are fascinating.

### **Gorilla Facts and Information**

Male gorillas between 8 and 12 years old are called “blackbacks,” as they won’t become silverbacks until they are 12 to 15 years old. A group of gorillas living together is called a “troop.” There can be 5 to 30 gorillas in one troop, led by a strong, experienced male known as a “silverback.” His job is a big one.
