Online Library Igg4 Related Disease

IgG4-related disease is an immune-mediated condition that can affect multiple organ systems. [1] [2] [3] [4] Common features include IgG4-related autoimmune pancreatitis, swelling of or within an organ system (an inflammatory pseudotumor), salivary gland disease (which can lead to enlargement of the salivary glands), swollen lymph nodes (lymphadenopathy), skin manifestations, and symptoms consistent with allergies or asthma.

IgG4-related disease | Genetic and Rare Diseases ...

IgG4-related disease (IgG-RD) describes a group of fibroinflammatory diseases that affect a variety of tissues resulting in tumor-like effect and/or organ dysfunction. Clinical presentation varies according to the tissue(s) involved, and diagnosis relies on tissue findings of dense infiltration of IgG4-positive plasma cells and a characteristic storiform fibrosis.

IgG-4 Related Disease: An Introduction

IgG4-related disease is a newly-described rare syndrome consisting of many disease entities that were previously thought to be unrelated. These conditions have the pathological features of: Inflammatory pseudotumours, that is, organomegaly or nodules within an organ Lymphoplasmacytic infiltration of tissues with many IgG4-positive plasma cells

IgG4-related disease | DermNet NZ

A number of autoimmune diseases that affect diverse organ systems have recently been noted to be related to IgG4 autoantibodies. The authors review the spectrum of IgG4-related disease and the...

IgG4-Related Disease | NEJM

IgG4-related disease is a fibro-inflammatory condition that can affect nearly any organ system. Common presentations include major salivary and lacrimal gland enlargement, orbital disease, autoimmune pancreatitis, retroperitoneal fibrosis and tubulointerstitial nephritis.

...

Online Library Igg4 Related Disease

IgG4-related disease is a protean condition that mimics many malignant, infectious, and inflammatory disorders. This multi-organ immune-mediated condition links many disorders previously regarded as isolated, single-organ diseases without any known underlying systemic condition. It was recognised as a unified entity only 10 years ago.

IgG4-related disease - The Lancet

IgG4-related disease is a fibro-inflammatory condition that can affect nearly any organ system. Common presentations include major salivary and lacrimal gland enlargement, orbital disease, autoimmune pancreatitis, retroperitoneal fibrosis and tubulointerstitial nephritis.

IgG4-related disease: what a hematologist needs to know

IgG4-related disease affects nearly every organ, but particularly the meninges, orbits (extraocular muscles and retrobulbar masses), lacrimal glands, salivary glands, thyroid gland, pancreas, bile ducts, lungs, kidneys, aorta, and retroperitoneum.

Management of IgG4-related disease - The Lancet Rheumatology

● Immunoglobulin G4-related disease (IgG4-RD) is an increasingly recognized syndrome of unknown etiology, which is... ● The hallmarks of IgG4-RD are lymphoplasmacytic tissue infiltration of mainly IgG4-positive plasma cells and small... ● The pathogenesis of IgG4-RD remains incompletely understood, ...

UpToDate

Immunoglobulin G4 (IgG4)-related disease is a relatively recently proposed clinical-pathologic entity that is characterized by fibro-inflammatory lesions rich in IgG4-positive plasma cells and, often but not always, elevated serum IgG4 concentrations.

IgG4-related Disease from Head to Toe | RadioGraphics

Lymphomas that occur in the setting of IgG4-related disease (IgG4-RD) are uncommon. Most reported cases derive from Asia and are MALT lymphomas occurring in orbital IgG4-RD. The spectrum of lymphomas among IgG4-RD patients in the Western

world remains poorly defined. The aim of this study was to rep ...

Lymphomas in IgG4-related Disease: Clinicopathologic ...

IgG4-related diseases comprise a recently recognized systemic syndrome characterized by mass-forming lesions in mainly exocrine tissue that consist of lymphoplasmacytic infiltrates and sclerosis. There are numerous IgG4-positive plasma cells in the affected tissues, and the serum IgG4 level is increased in these patients.

IgG4-related Disease: Historical Overview and Pathology of ...

Immunoglobulin G4-related disease (IgG4-RD) is a recently recognized fibroinflammatory disorder that can result in lesions in almost any organ, can involve multiple organ systems, and can lead to organ failure. 1. Khosroshahi A, Wallace ZS, Crowe JL, et al. International Consensus Guidance Statement on the Management and Treatment of IgG4-Related Disease.

IgG4-Related Disease | ARUP Consult

IgG4-related disease is an autoimmune disorder affecting millions and has no established cure. Previous research indicates that T cells, a major component of the immune system, and the...

Solving the puzzle of IgG4-related disease, the elusive ...

Immunoglobulin G4 (IgG4)-related disease (IgG4-RD) is an immune-mediated condition that can affect almost any organ and is now being recognized with increasing frequency. IgG4-RD is characterized by a lymphoplasmacytic infiltrate composed of IgG4 + plasma cells, storiform fibrosis, obliterative phlebitis, and mild to moderate eosinophilia.

IgG4-Related Disease | Annual Review of Pathology ...

IgG4-related digestive disease can be diagnosed only with a comprehensive work-up that includes histology, organ morphology at imaging, serology, search for other organ involvement, and response to glucocorticoid treatment.
