Understanding proper bearing lubrication procedures is critical to ensuring long-term, trouble-free performance. Klüber Lubrication has prepared this explanation as a general guide. If a more detailed explanation is required, please contact your nearest Klüber Lubrication representative or the manufacturer of the lubricant you are using.

Guide to Proper Bearing Lubrication Procedures

Chain lubricants (lube) are split into three categories: dry, wet and all-round. Dry lubes: Dry lubes are based around wax or Teflon, and they 'dry' in place on the chain; leaving a lubricating layer that is less likely to attract dust. This makes dry lubes ideal for dry, dusty riding conditions.

Lube Guide - Trittech Lubricants

Chain lubricant: Properly lubricating your chain helps extend the life of your drivetrain. Always apply bicycle-specific lube oil to a clean chain. There are two types of lube: wet or dry. Wet lube is best to use when you'll be riding in wet conditions. It strongly adheres to the drivetrain and is less likely to rinse off in rain.
