If you're running wiring through your boat's engine room, ABYC standards assume the temperature is 122°F (50°C). If you're planning a circuit with #6 AWG wire size, it can safely carry 80 amps outside the engine room, but only 46.4 amps in the hotter engine room environment. In general, maximum current is 15 percent less in engine ...

The battery should be a combo starting/deep cycle battery, usually sold as a "marine battery". An ordinary auto battery would do for starting and lights, but for running a radio and other electronics something with a little more of a deep cycle capacity will be needed so the battery doesn't go flat while you're fishing and listening to the radio, and leave you stranded when you try to ...
