In the Rockman line, the OpAmps are not used to provide directly the clipping: they are always used in their linear range. The clipping components are a pair of LED's (right picture - X100), and the OpAmps around them are used to filter the signal to obtain the proper sound, without clipping themselves (they are always used in their linear range).

The Rockman X100 was introduced in 1984, and there are three possible REV's: The rare REV08 is stamped Rockman X100 on the rear panel, but the front panel is marked "Rockman", like the Rockman I, II and IIB. The X100 REV09 has the Rockman X100 front panel, but has no side TRS mini-jack for an external power-supply.

I remember back in the early 80s' when the Rockman product line came out. The X100 headphone amp had such a huge and lush tone when used as for DI or plugged into a mixing board with tone as wide as the Mississippi River. The Rockmodule series soon followed and so did a whole slew of outstanding products.

The Rockman is a headphone guitar amplifier. The original Rockman was developed and built by Scholz Research & Development, Inc., a company founded by Tom Scholz, who is also the founder and a key member of the rock band Boston. Scholz Research & Development was sold to Dunlop Manufacturing, Inc. in 1995. Dunlop continues to manufacture the Rockman Ace, and Tom Scholz's signature still appears ...

Rockman (amplifier) - Wikipedia

The MIDI Mate has been designed with one concept in mind: allow the performing musician complete and easy control over their MIDI equipment. The MIDI Mate is an intelligent controller allowing you to send up to six preset changes on six different channels and five control changes while controlling one realtime parameter via a volume pedal ALL AT ONCE.
